Inventory of Hazardous Material (IHM) – PART II

Once the decision to recycle a ship has been taken, part II of the Inventory should be developed before the final survey, taking into account that a ship destined to be recycled shall conduct operations in the period prior to entering the Ship Recycling Facility in a manner that minimizes the amount of cargo residues, fuel oil and wastes remaining on board.

If the wastes listed in part II of the Inventory provided in table C (Potentially hazardous items) of appendix 1 (MEPC.269(68)) are intended for delivery with the ship to a ship recycling facility, the quantity of the operationally generated wastes should be estimated and their approximate quantities and locations should be listed in part II of the Inventory.

Part II

Operationally Generated Waste
